Abraham Arango
Web Developer - Real Clear Media Group

Elgin, IL - Email me on Indeed: indeed.com/r/Abraham-Arango/b6ba8a9ee6a2731c

Full stack developer currently working mainly working with web centered technologies such as MySQL, PHP, JavaScript with the ability to develop from database design layers all the way up to UX and UI design. I work with an open mind to learn just about any other technology or software building tools to be a better programmer and build better software faster.
Willing to relocate to: Elgin, IL
Authorized to work in the US for any employer

WORK EXPERIENCE

Web Developer
Real Clear Media Group - March 2016 to Present

Much of the work is heavy LAMP work for creating entirely custom CMSs for all of the sites the company has. On the public side of the sit, Javascript, Jquery and JSON files are used to dynamically update the site on html files published from our PHP CMSs.

Below are some of the projects I have worked on:
• Created the entire browser push notifications system entirely custom to tie in with the RealClearPolitics CMS.
◦ Notifications are sent from our system so that editors can easily send out notifications for current content.
◦ User subscriptions to notifications is completely custom.
◦ Analytics for how notifications do and subscription rates.

• Developed the entire CMS for RealClearInvestigations.com and the several features on the public side such articles with embeds and the donations feature that ties in with PayPal.
◦ The article embeds is based on membership system that only allows registered domains to grab our content and embed it on their site.
◦ Donations to PayPal are done using their rest API and is completely custom.

• Worked on the redesign of several sites that had an old outdated design and an outdated CMS.
• Worked on a new multisite CMS that replaces every different CMS we have for each site. The technology used for this new multisite CMS is Laravel for server side code and Vue js for user side code.
◦ This new CMS is meant to have one single CMS for all sites rather than 15 different CMSs.
◦ It is also meant to be built with new technology to make it sleeker with SPA modules, responsive designs, and stronger security.

Web Developer
Drive & Shine, Inc - September 2015 to March 2016

• Only software engineer to develop both the software that customers utilize such as the website and company online store as well as internal software that employees use to accomplish their work.
• Developed a LAMP based maintenance tracking system to be used company wide. Some key features are as follows:
◦ Different website experience depending on employee role.
◦ Each store being able to submit issue tickets to notify all maintenance personnel of a problem at each location.

◦ Complete list and historical data of issues and tasks done to equipment its related components for each location.
◦ Time based maintenance repeating tasks that recreate themselves and set themselves due based on specified time frames.

• Developed an inventory tracking system for store supplies. Some key features are as follows:
◦ Store items have set max order amounts for a certain time frame.
◦ Form automatically blocks the ordering items that have already reached their time frame limit and will reset the item once the time frame is reached.
◦ Ordering historical data pages with multiple dynamically made graphs to analyze ordering trends.
◦ Inventory tracking of items amounts at warehouse from where items are ordered from.
Move on to Real Clear Media Group because the work circumstances did not allow for skill growth and the work was stagnant lacking direction.

Production Control Analyst
Specialty Products & Polymers, Inc - February 2007 to September 2015

• Analyze and direct production schedule with the orders from customers.
• Work with production supervisors and plant manager to manage production employees and efficiently meet customer orders.
• Committed to giving customers great customer service by answering their questions in detail and resolving any problems that they may have.
• Responsible for all outbound shipments to be shipped on time and with the correct documentation.
• Keep inventory of all packaging materials such as plastic sheeting and cardboard boxes.

Web Developer Internship
Kitchology, Inc - July 2014 to December 2014

• Developed web based systems using PHP, HTML, CSS, Javascript, and SQL.
• Worked remotely being responsible for completing and accomplishing my work without supervision.
• Communicate efficiently through email and weekly Skype conference meetings.

Wordpress and Web Developing Internship
J&S Coatings / Vortex Spray Liners - April 2012 to August 2012

• Developed a new Wordpress managed company website based off their previous static HTML one.
• Developed several Wordpress managed websites for their "dealers" customers.
• Modify HTML, CSS, and PHP in Wordpress themes for custom needs.
• Organize their web media content for future quick searching and usability.
